Feature

Daily logs that don't get lost.

Signed-off records you can rely on in a dispute.

The Problem

Site diaries are kept on paper: records are incomplete, handwriting is hard to read, and sign-offs are delayed while staff chase contractors.

Project managers can’t see what’s happening on site, and when a dispute about delays arises, teams scramble to piece together fragmented logs.

What Changes

- **A complete, legible record of every site day**
- **Daily records agreed and signed by both parties**
- **Project managers see site activity in real time**

How it works

What you get	How Epic does it
Daily activity logging	Weather, site conditions, key activities and delays, with date and time stamps
Plant records	Plant hire and usage, with registration or serial numbers for traceability
Labour tracking	Labour types and headcounts, to monitor resources and productivity
Visitor log	Site visitors with purpose, duration and notes, for security and compliance
Work progress notes	Milestones, issues and observations that build a clear daily narrative
Digital signature capture	Secure sign-off by both site engineer and contractor
Audit-ready records	Every entry stored with a time stamp and signature
Part of projects	Add a Site Diary to a new or existing project, and fill it in from mobile or tablet

"From paper trails to project precision."
