Dashboards

Feature

From data to direction—visualise performance, track progress, and lead with clarity

Multiple Dashboard Types: Choose the format that fits your context:

Epic's **Dashboards** feature transforms raw data into clear, actionable insights—giving teams and leaders a real-time view of performance, progress, and priorities. Whether you're tracking strategic KPIs, operational metrics, or project milestones, Dashboards provide a flexible, visual interface that supports decision-making and accountability across the organisation.

Sweet Tonnage January - June

Executive Dashboard Example

Key Functions

- Multiple Dashboard Types: Choose the format that fits your context
- Simple Dashboards: Configure up to 5–6 key metrics for homepage visibility and team-level updates. Ideal for quick snapshots and daily stand-ups.
- External Dashboards: Link live spreadsheets from OneDrive to display selected ranges or charts. Any updates made to the spreadsheet automatically reflect on the dashboard—perfect for finance, planning, or shared reporting.
- Executive Dashboards: Consolidate data from across the organisation into a high-level view. Configure categories (e.g. Finance, Operations), intervals (e.g. Daily, Monthly), and KPIs with targets, weightings, and capture frequency.
- Gauge Configuration: Visual gauges display performance against targets using colour-coded intervals. Click any gauge to drill down into the underlying data and contributor updates—ideal for leadership reviews and performance diagnostics.
- Live Performance Capture: Authorised users enter actual performance data, which feeds directly into the dashboard. This ensures insights are current, reliable, and ready for action.
- User Permissions & Secure Access: Assign viewing or data capture rights to specific users—ensuring secure, role-based access and protecting sensitive metrics.
- Home Screen Integration: Dashboards can be embedded into the Epic Home Screen for instant visibility, or restricted to authorised viewers only—giving you control over what's seen and shared.
- Mobile App Enabled: View and update dashboards on the go—perfect for site managers, executives, and remote teams.
