Feature

A safer workplace, faster.

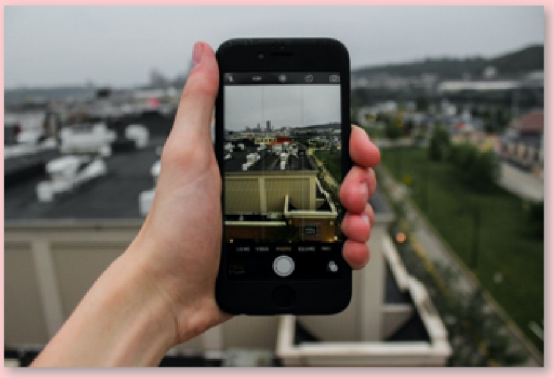

Staff report hazards from their phones, and the right people are alerted.

The Problem

Incidents of all sizes happen, from property damage to accidents and injuries.

But when reporting is clunky and time-consuming, staff don't bother.

Near misses, hazards and damage go unreported until they escalate, and nobody knows who should act or whether anything was done.

What Changes

Anyone can report a concern in seconds

The right person is alerted straight away

A full, audit-ready record of every concern raised

How it works

What you get	How Epic does it
Snap, tag, submit	Take a photo in your phone's browser – no app to download; GPS location and time stamp are added automatically
QR code access	Scan a QR code posted on site to jump straight to the reporting screen
Area and comments	Pick the area from a dropdown, add a comment and submit – built for frontline use
Instant alerts	The area owner is notified immediately, with all the details
Closing the loop	Once resolved, the person who reported it gets an automatic thank-you

Admin oversight and reports	Every submission logged and downloadable, for audits, trends and improvement

"From silence to safety-first."
